A safe workplace has always been a basic need for everyone. However, the RUX MOBILO product group has led to a completely new definition of the term “safe workplace”. After all, thousands of craftsmen stand on RUX-MOBILO mobile scaffolds doing their jobs every day, with the security of knowing their workplace is safe even at great heights.

Using a RUX MOBILO scaffold means mobility, speed and flexibility. Such qualities in your working equipment are becoming more and more vital in times of keen competition. You can’t rely on obsolete and inefficient equipment to ensure the success of a building project. Improvised solutions take time, and time is money, especially where skilled craftsmen and specialists have to solve the problem of reaching their workplace and making it safe before they can start work.
System efficiency is the keyword, since the RUX MOBILO product group is a logical continuation of the system idea which you will find in all scafom-rux product lines.

Once you have tried it out, you will be a MOBILO fan.
Each RUX MOBILO model has its own system, but the whole product group is also a logical system in its own. A system characterized by substantial user benefits in every respect:

- Only few basic elements that can be used with all RUX MOBILO models, thus making this product group a truly modular system
- Light, easy-to-handle components for user-friendly, ergonomic assembly
- Predominantly slip-on connections for quick assembly
- All elements are optimised for efficient transport and space-saving storage
- Every scaffold model complies with the relevant national and European technical regulations
- All RUX MOBILO models can also be used as basic elements for many special structures, such as suspended scaffolds, large ceiling scaffolds or stair towers.
Innovative leadership of an industry: this is our commitment!

“We invest in developing new scaffolding elements and optimised solutions every year. We owe this to our faithful customers” says Volker Rux, Managing Director.

This continuous process can only be successful through close partnership with our customers. Many suggestions from our customer base have already led to genuine innovative products which were eventually mass-produced.

There are good reasons for innovation:

- The cost-efficiency potential of any system is never completely exploited. Here, the focus is primarily on the product design of existing elements.
- New technologies promote improvements in manufacturing techniques and the use of new materials, as well as the implementation of sophisticated ideas.

Our product range and total commitment are aimed at providing you with a significant competitive edge in the future as well.

The top position is lonely – come and join us!

The RUX MOBILO system has been designed with this thought in mind. It has been developed in such a way that every mobile scaffold model can be assembled to reach its full height within a minimum of time. Stable slip-on connections, no time-consuming screwing, self-locking fastening devices for ledgers and diagonals, decking made of plywood or aluminium, and base units with height-adjustable castors, are all designed to promote fast and safe assembly.

This is what everybody wants: the fastest way to the top!

Speed is an important consideration on the way up. The faster a building site is set up or more precisely, the faster a scaffold is erected, the sooner work can be started, and the faster money can be earned. So don’t waste your human resources on work that doesn’t generate any revenue or generates revenue only under certain conditions. Value performance for building contractors only begins when craftsmen and specialists can actually start to work on their jobs.
RUX-MOBILO 800 covers the majority of applications for mobile scaffolds.

Range from - to in steps of 2 metres
A maximum working height of 14 metres with a 2.60 m x 0.80 m working platform is generally sufficient to meet the needs of most users. Therefore RUX MOBILO 800 is the classic among mobile scaffolds. Here also, the motto is: „safety with a logical system behind“, which includes a GS certificate from RW-TÜV. After all, we are offering ultimate top-level workplace safety.

Similar to all other members of the MOBILO family, RUX MOBILO 800 is characterized by some special technical features that combine efficiency with safety.

- Few individual components, easy to handle, for cost-efficient one-man assembly and ideally designed for transport and storage
- Low capital investment thanks to utilisation of all technical possibilities, such as providing access via slip-on ladders
- Special castors locking in centre position to provide maximum load capacity
All the advantages of RUXMOBILO 800 – and more. This is how the RUX MOBILO 1400 mobile scaffold could be described. Its generously dimensioned working platform measuring 2.60 m x 1.40 m provides ample space for workers, materials and tools.

Production in the rhythm of time – just in time, and designed to fit

Ultra-modern manufacturing equipment ensures the proven, superior product quality from scafom-rux.

Besides its own production facilities, scafom-rux employs numerous small and medium-sized manufacturing partners to ensure prompt delivery of the complete product range. In addition to process control and quality assurance, our main focus is on flexible production scheduling for reliability in meeting all our customers’ demands.

Of course individual customised projects or mini-series also have their proper place in this organisational structure.

We want to be able to cater to your special requirements at short notice and with top quality products at any time. Can there be any better way to win the loyalty of our customer base?

Few individual components for more efficiency in assembly, transport and storage. The few steps required to assemble the scaffold ensure greater speed. More scaffolding in return for only a small additional investment, since RUX MOBILO 1400 is a compatible modular system based on the essential elements of RUX MOBILO 800.

The advantage is obvious: whoever starts off with RUX MOBILO 800 and then wishes to invest in the larger model RUX MOBILO 1400 later on does not have to purchase an entirely new mobile scaffold, but only the additional elements that he really needs.

Diagonals, rails and working platforms are identical for both scaffold models, which means a significant cut in the required capital investment.

Less can be more! This also applies to RUX MOBILO 1400.
SIMPLE ASSEMBLY

THE HUMAN FACTOR
Exploring the RUX MOBILO product family leaves ample scope for creativity. Just replace the term “mobile scaffold” by “problem solving”. Scaffolds are our company’s core competence. Consequently, we have always had the focus on our customers and their needs in developing the RUX MOBILO systems as well. This means, the compatibility between different scafom-rux product groups is a substantial advantage for users. Thanks to an extensive range of accessories that can be combined with the basic elements of RUX MOBILO scaffolding, you will often have a chance to produce a low-cost alternative to scaffold a building.

Extremely popular special solutions are suspended scaffolding structures, chimney scaffolds, scaffolds with scafom-rux aluminium planks or mobile cradles combined with RUX flanged wheels and triangular columns.
A vital characteristic of capital goods besides safety and efficiency is their durability. This has also been an important consideration in developing the MOBILO product family. The high load-bearing capacity of the individual elements has been achieved by using a first-grade aluminium alloy, which also prevents corrosion through weathering. Moving parts and parts subjected to particular strain have been designed to withstand wear even under the toughest conditions on building sites.
scafom-rux – is one of the leading suppliers of scaffolding systems, probs and formwork.

Thanks to the pan-European coverage of our network of companies, our presence in important construction and production markets such as Germany, China, Canada and the United States and contacts in such markets as the United Arab Emirates, we know what is going on.

Our partner know our strength and we learned to esteem it.

Partnership is a matter of trust!
“Partnership is so much talked about, but it can neither be demanded nor bought. It must be earned. In this respect, we have a clear competitive edge, together with our customers”,

says Volker Rux, Managing Director.

When is a team something special? When it is a “big player”? Or when, regardless of its size, it has made a commitment to working together in the best way possible? We of the RUX team only become special when you accept us as members of your team. This is our motivation!

Let’s get moving!!
Scafom-rux has a significant business presence in the following countries:

Belgium, Canada, Chile, China, Czech Republic, Germany, France, Great Britain, Netherlands, Peru, Poland, Portugal, Romania, Spain, Turkey and the USA.
